                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is human ik6 protein which contains the amino acid sequence of human apolipoprotein(a) kringle domain IV36 (KIV36). The human apolipoprotein(a) kringle domains IV36 (LK6 protein). IV37 (LK7 protein) and V38 (LK8 protein) together form the angiogenesis inhibitor, KK8 protein. LK68, LK6, LK6, LK7, and LK8 are inhibitors are of endothelial cell proliferation, cell migration and normal development of capillaries in the chick embryo choricallantoic membrane (CAM). LK68 protein, its single kringles or their functional equivalents, are useful for treating angiogenesis-mediated diseases, such as cancer, rheumatoid arthritis, psoriasis or ocular angiogenic disease in animals or humans. LK68 is useful as an anticancer agent and also for inhibiting primary tumour growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 KSPVVQDCYHGDGRSYRGISSTTVTGRTCQSWSSMIPHWHQRTPENYPNAGLIENYCRNP
                       Novel angiogenesis inhibitor, LK68 for treating angiogenesis-mediated diseases, e.g. cancer and rheumatoid arthritis, has human apolipoprotein(a) kringle domains IV36, IV37 and V38 amino acid sequence -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Preparation of Kringle five peptide fragment for treating various disorders such as angiogenic, ocular, skin diseases and cancer, involves mixing mammalian plasminogen and elastase followed by

                                                                                                                                                                                                                                                                                                                                                                           diseases (e.g., rheumatoid arthritis), ocular diseases, skin diseases (e.g., psoriasis), blood vessel diseases (e.g. heamargiomas, osler-webber Syndrome), diseases caused by excessive or abnormal stimulation of endothelial cells (e.g., crohm's disease, atherosclerosis), diseases which have amplogenesis as a pathologic consequence (e.g., cat scratch disease and ulcers). The peptides are also useful as a birth control agent which inhibits ovulation and establishment of the placenta. Sequences Abdol96-Bol99 represent fragments of human plasminogen used in an exemplification of the invention.

Note: This sequence is not shown in the specification, but is derived from the full length human plasminogen sequence (AAB01887) shown in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Kringle 4; plasminogen; anti-angiogenic; angiogenesis; angiostatin; cytostatic; antiarthritu; antihneumatic; antidabetic; ophthalmological; immunosuppressant; vasotropic; vulnerary; antiarteriosclerotic; human; dermatological; cancer; tumour; birth control; vascularization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 VVQDCYHGDGQSYRGTSSTTTGKKCQSWSSMPPHRAQKTPENYPNAGLIMNYCRNPDAD 60
                                                        The invention relates to a method of preparing plasminogen kringle 5 peptide fragments. The method comprises mixing mammalian plasminogen and elastase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of anglogenesis and endothelial cell proliferation and migration. The peptides are useful for treating anglogenic diseases, primary and metastratic solid tumours and carcinomas of various organs such as breast, genital tract, endocrine glands, skin, tumours of the brain and eyes and solid tumours arising from haematopojetic malignancies such as leukaemias and immens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     4 VVQDCYHGDGRSYRGISSTIVTGRTCQSWSSMIPHWHQRTPENYPNAGLTENYCRNPDSG 63
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /note= "specifically claimed fragment (AAY77723)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

                                                                                                                                                                                                                                                                                                            diseases include intestinal adhesions, atherosclerosis, scleroderma, and hypertrophic scars. The fragments can be used as birth control agents by preventing vascularization required for embryo transplantation. The present sequence represents the kringle 4 sequence of human plasminogen
                                                                                                                       The invention provides fragments of kringle 1, 2 or 4 of human plasminogen that contain a lyshe binding site and have anti-angiogenic activity. The peptides of the invention function as antianglogenic agents, for the treatment process and diseases involving angiogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human, angiogenesis inhibitor, LK7; apolipoprotein(a) kringle domain; angiogenesis-mediated disease; cancer; rhemmatoid arthritis; therapy; cytostatic; antirhemmatic; antirhemmatic; antipsoriatic; psoriasis; ocular angiogenic disease; endothelial cell proliferation; tumour;
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                            Novel lysine binding fragments angiostatin used as antiangiogenic agents in the treatment of cancer, diabetic retinopathy, rheumatoid arthritis, psoriasis, atherosclerotic plaque formation, and other

                                                                                                                                                                                                                                                                            The present sequence is human LK7 protein which contains the amino acid sequence of human apolipoprotein(a) kringle domain LV37 (KM7). The human apolipoprotein(a) kringle domain LV36 (LK6 protein). IV37 (LK7 protein) and V38 (LK8 protein) 1096ther form the anglogenesis inhibitor, LK68 protein. LK68, LK6, LK7 and LK8 are inhibitors are of endothelial cell proliferation, cell migration and normal development of capillaries in the chick embryo choricallantoic membrane (CAM). LK68 protein, its single kringles or their functional equivalents, are useful for treating anglogenesis mediated diseases, such as cancer, rheumatoid arthritis, psoriasis or ocular anglogenic also for inhibiting primary tumour growth.
                                                                      Novel angiogenesis inhibitor, LK68 for treating angiogenesis-mediated diseases, e.g. cancer and rheumatoid arthritis, has human apolipoprotein(a) kringle domains IV36, IV37 and V38 amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5 VQDCYHGDGRSYRGISSTTVTGRTCQSWSSMIPHWHQRTPENYPNAGLIENYCRNPDSGK

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0;
                                           The sequence is encoded by a synthetic oligonucleotide and is the kringle 4 domain of plasminogen. It is used to construct a modified plasminogen activator (mPA) of greater fibrin selectivity than normal PA. The mPA is used in the treatment of pulmonary embolism, thrombosis, myocardial
                                                                                                                                                                                                                                                                                                                                                        63
                                                                                                                                                                                                                                                                                                                                                                                The invention relates to new methods and compositions for inhibiting endothalial cell proliferation, using as active component an angiostatin fragment, a combination of angiostatin fragments, or human, Rhesus, porcine or bovine plasminogen and is a kringle 1, kringle 2, kringle 2, kringle 1, krin

KED polypeptide, Kringle proteins, or a kringle derived from human tissue plasminogen activator (TPA) protein are used to inhibit angiogenesis. Kringle protein, KED or tPA are useful for treating tumours, as well as atherosclerosis, arthritis, retinopathy and other similar diseases. KED is also useful for the treatment of diseases such as bronchial vascular congestion, inflammatory bowel disease such as bronchial vascular congestion, castleman's disease, psorlasis, heptifitis, aneurysm, renal disease and haemangioma. The present sequence represents kringle 4 of human plasminogen, which is used in the course of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            tissue plasminogen activator; tumour; atherosclerosis; arthritis; retinopath; bronchial vascular congestion; inflammatory bowel disease; adult respiratory distress syndrome; Gastleman's disease; psoriasis; hepatitis; aneurysm; renal disease; haemangioma.

The active component can be used for treating anglogenesis-mediated diseases such as cancer, arthritis, macular degeneration and diabetic retinopathy. It can also be used to develop antibodies for use in diagnosis, detection and therapy.

The present sequence, murine kringle 4, is a specific angiostatin fragment which can be used in the invention, and represents amino

Human, open reading frame; ORFX; gene therapy; cancer; cirrhosis; hyperproliferative disorder; psoriasis; benign tumour; haemorrhage; degenerative disorder; osteoarthritis; neurodegenerative disorder; cardiovascular disease; diabetes mellitus; systemic lupus erythematosus; hypertension; hypothyrodism; cholesterol ester storage disease; immune deficiency; immune disorder; infecticus disease; autoimmune disorder; rheumatoid arthritis; autoimmune thyroiditis;
The present invention describes substantially purified human proteins (referred to as open reading frame, ORRX, where X is 1-11491 (see Table in the specification). ABMI5762 to ABY1252 encode the human ORFX proteins given in ABPD00010 to ABP11500. ORRX proteins are useful for treating or preventing a pathology associated with an OREX-associated disorder in humans, and in the manufacture of a medicament for treating syndrome associated with OREX-associated disorder. ORFX polynucleotide sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage, ostecarthrits, neurodegenerative disorders, disorders related to organ transplantation, cardiovascular diseases, diabetes mellitus, systemic upupus erythematosus, hypertension, hypothyroidism, cholesterol ester storage disease, various immune deficiencies and disorders, infectious diseases, autoimmune disorders such as multiple sclerosis, rheumatoid arthritis, autoimmune thyroiditis, myasthenia gravis, graft versus-host disease and autoimmune inflammatory eye disease. ORFX proteins are also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    useful for treating burns, incisions, ulcers, for treating osteoporosis, bone degenerative disorders, or periodontal disease, and for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues and conditions resulting from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and autoimmune disorders

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to new methods and compositions for inhibiting endothelial cell proliferation, using as active component an angiostatin fragment, a combination of angiostatin fragments, or aggregate angiostatin. The fragment is preferably derived from murine, human, Rhesus, porcine or bovine plasminogen and is a kringle 1, kringle 2, kringle 3, kringle 1-2, kringle 1, kringle 1-4 FABKLS protein. The aggregate angiostatin has a Mol. Wt. of 4-55 kD and is derived from a plasminogen fragment beginning at approximately amino acid number 98 of murine, human, Rhesus, porcine or bovine plasminogen. The active component can be used for treating anglogeneration and diabetic retinopathy. It can also be used to develop antibodies for use in diagnosis, detection and therapy. The present sequence, murine kringle 3, is a specific angiostatin fragment which can be used in the invention, and represents amino acids 275-352 of murine plasminogen or amino acids 178-255 of murine
                                                                                                                                                   1;

                                                                                                                                                                                                                                     The invention relates to new methods and compositions for inhibiting endothelial cell proliferation, using as active component an angiostatin fragment, a combination of angiostatin fragments, or aggregate angiostatin. The fragment is preferably derived from murine, human, Rhesus, porcine or bovine plasminogen and is a kringle 1, kringle 2, kringle 3, kringle 1-3, kringle 1-3, kringle 1-3, kringle 1-1, kringle 1-4 or kringle 1-4 bakLs protein. The aggregate angiostatin has a Mol. Wt. of 45-65 kD and is derived from a plasminogen fragment beginning at approximately mainto acid number 98 of murine, human, Rhesus, porcine or bovine plasminogen. The active component can be used for treating anglogenesis-mediated diseases such as cancer, arthritis, macular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          degeneration and diabetic retinopathy. It can also be used to develop antibodies for use in diagnosis, detection and therapy.

The present sequence, human kringle 3, is a specific anglostatin fragment which can be used in the invention, and represents amino

It can also be used to devel antibodies for use in diagnosis, detection and therapy. The present sequence, portoine kringle 3, is a specific angiostatin fragment which can be used in the invention, and represents amino acids 178-255 of porcine angiostatin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        endothelial cell proliferation and treating angiogenesis-mediated diseases, e.g. cancer, arthritis or diabetic retinopathy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

The fragment is preferably derived from murine, human, Rhesus, porcine or bovine plasminogen and is a kringle 1.

Kringle 2, kringle 3, kringle 1-3, kringle 1-3, kringle 1-2, kringle 1-2, kringle 1-2, kringle 1-2, kringle 1-4 or Kringle 1 described from a plasminogen and searched from a plasminogen from a plasminogen from a plasminogen from a plasminogen from the sed for treating an independent and diseases such as cencer, arthritis, macular degeneration and diabetic retinopathy. It can also be used to develop antibodies for use in diagnosis, detection and therapy.

The present sequence, Rhesus kringle 3, is a specific angiostatin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ó

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The specification describes a human polypeptide which is a potent anglogenesis inhibitor, and is designated KED. KED polypeptide, kringle proceins, or a kringle derived from human tissue plasminogen activator (tPA) protein are used to inhibit angiogenesis. Kringle protein, KED or tPA are useful for treating tumours, as well as atherosolerosis, arthritis, retinopathy and other similar diseases. KED is also useful for the treatment of diseases such as bronchial vascular congestion,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8 CYHGDGRSYRGISSTTVTGRTCQSWSSMIPHWHQRTPENYPNAGLTENYCRNPDSGKQPW

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method of preparing plasminogen kringle 5 peptide fragments. The method comprises mixing mammalian plasminogen and elastrase in the ratio 1:100-1:300, followed by incubating and isolating the fragment. The kringle 5 peptides are inhibitors of angiogenesis and endothelial cell proliferation and migration. The peptides are useful for treating angiogenic diseases, primary and metastatic solid tumours and carcinomas of various organs such as breast, genital tract, endocrine glands, kin, tumours of the brain and eyes and solid tumours arising from haematopoietic malignancies such as leukaemias and blymphomas. They are also used for the prophylaxis of various autoimmune diseases (e.g., rheumatoid arthritis), coular diseases, skin diseases (e.g., psoriasis), blood vessel diseases (e.g., haemangiomas, Osler-Webber
                                                                                                                                                                                                                                                                                                                                                                                   Plasminogen; human; Kringle domain; endothelial cell proliferation; anglogenesis; antiproliferative; antiarteriosclerotic; cytostatic; antiproliferametory; antiuloer; antirheumatic; antiarthritic; antianglogenic; cancer; tumour; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Syndrome), diseases caused by excessive or abnormal stimulation of endothelial cells (e.g., Orohn's disease, atherosclerosis), diseases dwhich have angiogenesis as a pathologic consequence (e.g., cat scratch disease and ulcers). The peptides are also useful as a birth control agent which inhibits ovulation and establishment of the placenta. Sequences AABO1905-B01919 represent fragments of human plasminogen used in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence is not shown in the specification, but is derived the full length human plasminogen sequence (AAB01887) shown in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Preparation of Kringle five peptide fragment for treating various disorders such as angiogenic, ocular, skin diseases and cancer, involves mixing mammalian plasminogen and elastase followed by

C; Comment: The high potential iron-sulfur protein (HiPIP) are a class of high-redox-pote
d in some other photosynthetic bacteria and in at least one genus (Paracoccus) of haloph
two HiPIP forms are found.
C; Superfamily: high potential iron-sulfur protein

"The primary sequences and neuromuscular effects of three neurotoxic polypeptides from the venom of Dendroaspis viridis.";

Bur. J. Biochem. 45:457-468(1974).

-1 SUBCELLUAR LOCATION: Secreted.

-1 TISSUE SPECIFICITY: Expressed by the venom gland.

-1 PTM: NEUROTOXIN 4.7.3 DIFFERS FROM 4.9.3 ONLY IN THAT TRP-26 HAS UNDERGONE PARTIAL PHOTOCXIDATION.

-1 MISCELLANBOOS: LD(50) IS 0.9 MG/MG BY INTRAPERITONEAL INJECTION.

-1 SIMILARITY: Belongs to the snake toxin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SEQUENCE FROM N.A.
